

Buoyancy for offloading hoses

OCIMF Hose Floats

Oil Companies International Marine Forum (OCIMF) Hose Floats are used to correctly configure submarine oil offloading hoses as they rise towards the surface.

They are designed for use in the most demanding environmental conditions and are available for use on a wide range of marine hoses.

The buoyancy provided by the floats configures the hose in such a way as to prevent damage caused by movement of the floating hardware above.

The floats are manufactured using high quality materials to industry recognised standards such as OCIMF and API-17L.

Benefits

- Resistant to marine growth
- Highly visible
- Impact protection
- Full inspection
- Range of fasteners
- Compatible with OCIMF certified hoses

Applications

- Offloading hoses

CRP Subsea delivers innovative and reliable offshore solutions that maximise business performance to meet your needs. Our dedicated and highly skilled staff are always on hand to provide seamless process support from initial idea, through to delivery and beyond.
